

The cyberattack on 12th of May 2017 and after....
A nice demonstration of **NON** Human Digital Rights and Responsibilities (HDRR)

Human Rights and Responsibilities in the Digital World (HRRD)

The relentless advance of science, for better or for worse

HRRD is interested in a **vital societal** theme :

- The Rights and Responsibilities of Humans in the Digital World

Our thinking are part of the 17 Global Goals

Human Rights and Responsibilities in the Digital World (HRRD)

Thinking to date

- Thinking formed by a [MindMap](#)
- Illustrates the different themes

The themes are:

- all related to each other
- crossways
- quite wide

MindMap Description :

- in the form of [roots](#)
- open to develop a **tree**

Among all the [themes](#), we have selected 5:

- **Education**
- **Digital Equity**
- **Security**
- **Economy**
- **Transhumanism**

Human Rights and Responsibilities in the Digital World (HRRD)

A class of Geneva college students takes part

- Elaboration of different types of texts (tale, human rights chart, fiction, caricatural dialog, arguments)
- A [drawing](#) – representation of the human being by new technologies
- They also bring other [questions](#)

Human Rights and Responsibilities in the Digital World (HRRD)

Our thoughts

Our studies are the beginning of a discussion in order to:

- Not repeat history
- A new humanity
- To be able to anticipate

Rather, measure the consequences of all these aspects on societies
BEFORE it is too late

It's not about banning AI or robots, however:

- Be aware of the impact's magnitude that the digital world as well as the robotization create
- For **our children**
- For **our future generation**
- For the **Human Race**

Human Rights and Responsibilities in the Digital World (HRRD)

Our recommendations

1. Define the position of a Human being in a digital world

- Robotized Human beings
- Humanized robots' networks

2. In this context, the role of **education** is essential in order to result in genuine **Information** and **knowledge** Societies

3. For the multiple players the Information and knowledge Societies (Governments, Companies, Communities, Individuals, International Organizations) Distinctive **Statements** taking into account the many diversities **must imperatively be taken** at different levels (UN General Assembly, Private sector, etc...)

This at all levels: **locally** and **internationally**

Thank you!
