Government

[Home](#) > [Our Future](#) > [Government](#)

Information and communications technologies (ICTs) are playing an increasingly vital role in the daily lives of all communities by revolutionizing their working procedures and rules of governance. ICTs offer a unique opportunity for governing elite, as ICT has the capacity to empower civil society to play its role more effectively and facilitate the performance of governments' main function-serving the citizens of the country. Executing in the government sector, ICT applications are promising to enhance the delivery of government services to citizens not only by improving the process and management of

Education

[Home](#) > [Our Future](#) > Education

As per the vision of the government and the national development agenda, education sector is considered as a key thrust area which directly contributes towards the development of a knowledge based society and knowledge based economy. ICT has a significant level of role in the development of education to the next era. This will directly contributes government policy on "Digitization of the economy" by promoting IT education at all levels of education and made younger generation more accessible to global job opportunities. It also aligns and contributes towards government education policy on "Facilitation to access to the digital world".

MILESTONES
